

## wireless scheduling

This remote application allows a builder to update a scheduled activity, approve purchase orders, manage variances, maintain quality control walk-throughs, initiate vendor notifications and send text and email message to suppliers.

Wireless Scheduling improves the communication between the home office and the job site. Using Wireless Scheduling, superintendents can monitor, control, and communicate daily construction activities. From the field they're able to keep accurate construction schedules and have the information they need to reduce costly errors and maintain consistent cycle times.

### Features and efficiencies.

- Manage and track schedule changes.
- Track and measure variance control.
- Keep in contact with others using notes and reminders.
- Communicate with trade or suppliers by phone, Direct Connect radio, text messaging and e-mail.
- Manage and complete activity checklists and quality control walks-throughs.

### Seamless integration.

Using BlackBerry and PalmOS handheld devices, Wireless Scheduling enables you to keep on track with the project. With improved communication with trades and suppliers lowers the cycle time of a project. Additionally, with the integration to Timberline Office® or the entire BuilderMT Workflow Management Suite, builders have the ability to:

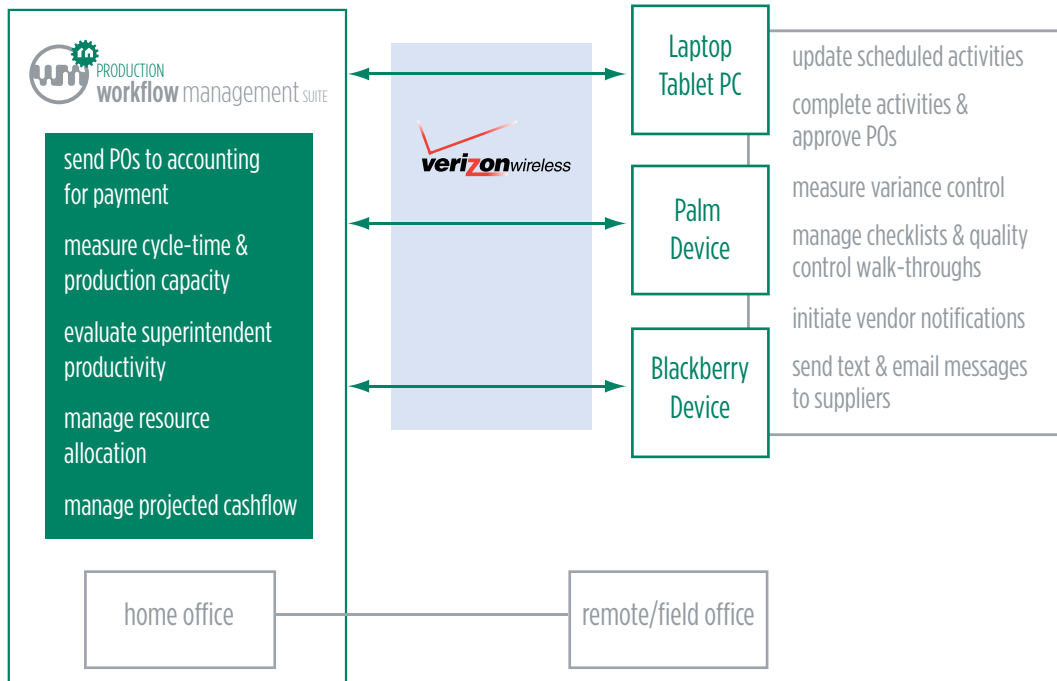

- Manage cash flow.
- Project accurate home closing dates.
- Approve purchase orders for payment.
- Auto send vendor notifications via print, fax or e-mail.
- Provide up-to-date status of a given activity or task.
- Enter reminders and notes.

- Define variance codes for determining delays in schedules.
- Effectively manage trade resources.

*Use handheld devices to enter variance codes as well as start and finish dates for scheduled and actual. Actual dates entered will trigger updates to the schedule and auto-select associated POs as ready for payment.*

## WIRELESS SCHEDULING WORKFLOW MAP

Wireless Scheduling, developed and supported by BuilderMT, is part of the BuilderMT Workflow Management Suite. It is also part of the Timberline Office production management suite of products, fully integrated financial and operations software for construction and real estate professionals.
