**Key BuilderMT Staff Additions Lay Foundation to Better Satisfy Builder
Technology Needs**

DENVER, Colorado – May 20, 2004 ---- Builder Management Technology, LLC, a leading supplier of software solutions for homebuilders and the co-developer of the Timberline® Office Production Management solution for single and multi-family production builders, announces a number of key staff additions to expand technology offerings for residential builders.

Brett Parkhurst, formerly Development Manager, has taken the title of Chief Technology Officer. Brett's position will take on more of a management and planning role in directing BuilderMT software engineers in the continuing development of software and technology solutions for the residential market. His areas of responsibility include software development, quality assurance, support, and technical documentation.

John Radi, formerly VP of Sales and Business Development for Service Software, and their product Punchlist Manager, has taken the position of VP of Business Development. John's extensive background in sales and marketing of customer service software will direct the design of BuilderMT's customer service and warranty initiatives for small, medium size and large builders. John will also manage the sales channel for BuilderMT's residential product offerings as well as assist Tom Gebes, President of BuilderMT, in developing strategic alliances with other industry suppliers, consultants and technology firms.

Damon Pugh has joined BuilderMT as a Senior Software Engineer. Damon's experience in Distributed Processing applications will drive BuilderMT's applications to be web enabled for database reporting retrieval and data entry functionality. Damon will also help BuilderMT address the needs of larger builders looking for a true desktop architecture for handling operational information from multiple divisions and locations in a common database.

Roger Long, formerly the IT Manager with Village Homes, which was voted as America's Best Builder for 2002, has taken the position of BuilderMT's IT Manager. Roger's primary responsibility will be to direct the internal infrastructure of BuilderMT's support and client communication systems. Additionally, through his experience with Village Homes, Roger brings to BuilderMT a working knowledge of industry specific software applications and web architecture deployment, which will assist BuilderMT in further addressing emerging technology needs of residential builders.

Rick Cosgrove, formerly of BuilderMT and more recently with Dewey Homes of Pennsylvania, has returned to BuilderMT in the Quality Assurance and Customer Support Department. With Rick's increased industry knowledge and his tenacity to "get things right" with the software, his position is to make sure that BuilderMT products are solid when our clients implement them.

"These new hires demonstrate the on-going commitment BuilderMT has in developing quality software solutions specifically designed to satisfy the needs of the homebuilding market," states Tom Gebes, President of BuilderMT. "With all of the hype and technology debacles over the years in this industry, the residential market is looking for a company that will provide the stability and ongoing development of the technology solutions they need to take their organizations to the next level. BuilderMT and Timberline will do just that," adds Gebes.

Builder MT was formed to provide industry specific technology solutions and consultation services to the residential construction market. The company's focus is to develop technologies for the residential building market. With over 300 production builder clients to date, BuilderMT receives tremendous feedback on the products the entire industry needs to run their homebuilding companies more efficiently.
